

Question : 11.10.4.23

Nikam Pratik Balasaheb (EE21BTECH11037)

1 PROBLEM

Prove that the products of the lengths of the perpendiculars drawn from the points $\begin{pmatrix} \sqrt{a^2 - b^2} \\ 0 \end{pmatrix}$ and $\begin{pmatrix} -\sqrt{a^2 - b^2} \\ 0 \end{pmatrix}$ to the line $\frac{x}{a} \cos \theta + \frac{y}{b} \sin \theta = 1$ is b^2 .

2 SOLUTION

$$\mathbf{P} = \begin{pmatrix} \sqrt{a^2 - b^2} \\ 0 \end{pmatrix} \quad (2.0.1)$$

$$\mathbf{Q} = \begin{pmatrix} -\sqrt{a^2 - b^2} \\ 0 \end{pmatrix} \quad (2.0.2)$$

Given line is,

$$\mathbf{x} = \begin{pmatrix} \frac{a}{\cos \theta} \\ 0 \end{pmatrix} + \lambda \begin{pmatrix} \frac{\sin \theta}{b} \\ \frac{\cos \theta}{a} \end{pmatrix} \quad (2.0.3)$$

A point on the line,

$$\mathbf{x}_0 = \begin{pmatrix} \frac{a}{\cos \theta} \\ 0 \end{pmatrix} \quad (2.0.4)$$

Normal vector,

$$\mathbf{n} = \begin{pmatrix} \frac{\cos \theta}{a} \\ -\frac{\sin \theta}{b} \end{pmatrix} \quad (2.0.5)$$

The line equation,

$$\mathbf{n}^T (\mathbf{x} - \mathbf{x}_0) = 0 \quad (2.0.6)$$

$$\begin{pmatrix} \frac{\cos \theta}{a} \\ -\frac{\sin \theta}{b} \end{pmatrix} \mathbf{x} = 1 \quad (2.0.7)$$

Comparing with $\mathbf{n}^T \mathbf{x} = c$, $c = 1$.

Distance from point \mathbf{P} to the line,

$$d_1 = \frac{|\mathbf{n}^T \mathbf{P} - c|}{\|\mathbf{n}\|} \quad (2.0.8)$$

Distance from point \mathbf{Q} to the line,

$$d_2 = \frac{|\mathbf{n}^T \mathbf{Q} - c|}{\|\mathbf{n}\|} \quad (2.0.9)$$

$$= \frac{|-\mathbf{n}^T \mathbf{P} - c|}{\|\mathbf{n}\|} \quad (2.0.10)$$

$$= \frac{|\mathbf{n}^T \mathbf{P} + c|}{\|\mathbf{n}\|} \quad (2.0.11)$$

$$d_1 d_2 = \frac{|(\mathbf{n}^T \mathbf{P})^2 - c^2|}{\|\mathbf{n}\|} \quad (2.0.12)$$

$$= \frac{\left| \frac{\cos^2 \theta (a^2 - b^2)}{a^2} - 1 \right|}{\frac{\cos^2 \theta}{a^2} + \frac{\sin^2 \theta}{b^2}} \quad (2.0.13)$$

$$= \frac{(b^2 \cos^2 \theta + a^2 \sin^2 \theta) a^2 b^2}{(b^2 \cos^2 \theta + a^2 \sin^2 \theta) a^2} \quad (2.0.14)$$

$$= b^2 \quad (2.0.15)$$

Hence Proved.
